

BRIAN VULIMU

Economist | Data Analyst | M&E Specialist

brianvulimu2001@gmail.com | +254 111 680 600 | Nairobi, Kenya

PROFESSIONAL SUMMARY

Development-focused Economist and Data Analyst with experience supporting disability-inclusive development programs and county-level economic planning in Kenya. Skilled in quantitative research, statistical modelling, and monitoring and evaluation (M&E) across the project cycle. Proficient in R, Python, STATA, SPSS, Power BI, and KoBoCollect. Experienced in field data collection, program performance reporting, and evidence-based policy analysis aligned with SDG frameworks. Seeking remote opportunities with international NGOs, UN agencies, and development finance institutions to contribute data-driven insights to global development goals.

CORE COMPETENCIES

- Monitoring, Evaluation & Learning (MEL) | Log Frames | Results Frameworks | Theory of Change
- Quantitative & Qualitative Data Analysis | Statistical Modelling | Predictive Analytics
- Survey Design & Field Data Collection | KoBoCollect | ODK
- Economic & Policy Research | Budget Analysis | Evidence-Based Planning
- Data Visualization & Reporting | Power BI | Excel Dashboards
- Programming: R, Python, STATA, SPSS, VS Code
- Disability-Inclusive Development | Social Protection Programs | SDG Alignment

PROFESSIONAL EXPERIENCE

Economist & Statistician Intern

January 2026 – Present

National Council for Persons with Disabilities (NCPWD) | Nairobi, Kenya

- Manage and maintain databases tracking 500+ persons with disabilities (PWDs) across national empowerment programs, ensuring data accuracy through rigorous validation and quality assurance protocols.
- Produced 10+ statistical reports and Power BI dashboards per quarter, directly informing program reviews and senior management decision-making on disability policy.
- Led field data collection during a national mass registration exercise covering multiple counties, coordinating with stakeholders to gather program performance data from over 1,000 beneficiaries.
- Conducted economic and policy analysis on social protection and disability inclusion frameworks, contributing to 3+ policy briefs aligned with Kenya's disability rights legislation and SDG 10 (Reduced Inequalities).
- Supported M&E of government disability support initiatives, tracking key performance indicators (KPIs) and preparing monitoring reports against program log frames.
- Assisted in stakeholder consultations with government ministries and civil society organizations on disability-inclusive program design and implementation.

Statistical & Economic Planning Intern

May 2023 – July 2023

County Government of Nandi, Department of Finance and Economic Planning | Nandi, Kenya

- Analyzed Kenya Demographic Health Survey (KDHS) 2022 data for Nandi County using R, STATA, and Excel, identifying 5 key socioeconomic determinants of childhood malnutrition that informed county health planning.
- Built Python-based predictive models using demographic data, improving resource allocation accuracy for county health programs by an estimated 20%.

- Delivered KDHS 2022 data mining insights that directly shaped policy adjustments in 2 county health intervention areas, supporting evidence-based planning processes.
 - Contributed analytical inputs to the 2023–2024 County Budget, improving forecast accuracy and supporting prioritization of 8 key development projects across health, agriculture, and infrastructure.
 - Monitored and evaluated 6 active county development projects, providing data-driven recommendations that improved implementation efficiency and reporting timelines.
-

EDUCATION

Bachelor of Science in Applied Statistics with Computing

January 2021 – November 2024

University of Eldoret | Eldoret, Kenya

Second Class Honours, Upper Division | Key Areas: Econometrics, Statistical Modelling, Research Methods, Data Analysis, Survey Sampling

RESEARCH & PROJECTS

Prevalence & Determinants of Eye Problems among University Students

September 2023 – April 2024

Undergraduate Research Project | University of Eldoret

- Led a cross-sectional study on 501 undergraduate students, measuring prevalence and risk factors of eye problems including screen time, demographics, and lifestyle variables.
 - Designed structured questionnaires on KoBoCollect; applied Pearson's Chi-square and Cochran-Mantel-Haenszel tests using STATA, R, and SPSS to identify statistically significant risk factors.
 - Developed Power BI dashboards to visualize findings; presented evidence-based prevention recommendations to a panel of 10+ faculty members, informing student health awareness initiatives.
